

## How can I access age data?

Age in years is available in all CIHI's databases. For pediatric reporting, age units are sometimes available in months (for patients between the ages of 1 month and 2 years) or days (for patients younger than 31 days).

CIHI's [Equity Stratifier Inventory](#) is periodically updated with a complete list of the stratifier information available in CIHI databases, as well as certain Statistics Canada databases.

## Statistics Canada's standards

[Age of person](#), May 22, 2007, to current

## Related resources
